

Enhancements

Weekly Notify Device Report: Site managers of schools that have eChalk Notify enabled will get an email report weekly on Monday mornings at 8AM Eastern time showing the number of devices connected to their school. This will allow you to see how many people have joined via code and also show you how many are logging into the application to get class and group alerts as well. With this information, you know exactly how many devices will get an alert when you push them out and how many users from your school are also getting class and group notifications. You'll see a template that looks like the following:

Your **Weekly eChalk Notify Device Report:**

Site Name	eChalk Notify Code	Devices connected by Code	Devices connected by logging in
Benjamin Franklin Elementary School	ZRGCEV	12	0

Notify Usage Details: In addition to receiving the above information in a weekly digest email, site managers can now access this information anytime by navigating to the settings tab of your school or district.

Bug Fixes

Accessibility – Brochure Theme

We have corrected a contrast issue that has affected feed and event blocks in the News theme when certain primary colors are in use for schools. Previously the source of the event was not displayed in a high enough contrast ratio. This has been corrected for any color that a school chooses to ensure that it will always meet the correct contrast ratio.
