Virtual AskQC Office Hours: 7xx Linking Fields
7xx Linking Fields

Robin Six
Database Specialist II

Charlene Morrison
Database Specialist II
A linking entry describes separately cataloged publications that are related to the item you are cataloging. These fields allow the establishment of bibliographic connections among materials with diverse relationships.

These fields can be broken down into 2 groups, those that can be used on any format and those most commonly used on continuing resource records, such as serials and integrating resources.

I will be covering the 1st group and Charlene will cover the 2nd group.
This screenshot shows how you can determine a 7xx linking field’s Input Standards and (R)epetatablity from that field’s page in Bibliographic Formats and Standards (BFAS).

The MARC tag number and the name of the linking field will contain an (R) next to it to if it is repeatable and an (NR) if it is not repeatable. Currently all 7xx linking fields are repeatable.

The field’s Input Standards lets you know when that linking field is “Mandatory,” “Required if applicable” or “Optional,” for Full (F) and Minimal (M) level cataloging.
You can automatically build linked entry fields that cite related records.

While logged on in Connexion or Record Manager, enter the linking field tag and appropriate indicators for the field you wish to use. Enter the OCLC control number of the record you want to cite in the field data cell and select the Insert from Cited Record command from the Edit menu in Connexion client or the Functions drop-down box in Connexion browser. In Record Manager select the Edit drop-down menu, then Field, to get to the Insert from Cited Record option. The data from the cited record will automatically be inserted into the appropriate subfields.

You will need to manually enter any subfield $i information for fields with a second indicator of 8, and remove any parenthetical information inserted with an ISBN in the subfield $z.

In this example I have created a field 776 with the indicators 08 and I have populated the field data cell with the OCLC record number of the record I want to cite. After using the Insert from Cited Record feature, the information from the cited record is automatically populated. All that’s needed now is to add the subfield $i information and
the subfield $a$ delimiter before the main entry.
7xx Linking Fields

General Linking Fields

Image by Sergei Tokmakov from Pixabay
Field 765 – Original Language Entry

- Link to the publication in its original language when the target item in the horizontal relationship is a translation
- Not indexed
- Does NOT transfer when records are merged
- May be added to and/or edited in PCC records
- Required if applicable field (full)
- Optional field (minimal)
- Repeatable field
- Display constant: **Translation of**

Information about the publication in its original language when the target item in the horizontal relationship is a translation. See [Linking Entry Fields--General Information](https://www.oclc.org/bibformats/en/7xx/765.html) for more information.

Sources:

Field 767 – Translation Entry

- Link to the publication in a language other than the original, when the target item in the horizontal relationship is the original or another translation
- Not indexed
- Does NOT transfer when records are merged
- May be added to and/or edited in PCC records
- Optional field
- Repeatable field
- Display constant: Translated as

Information about the publication in a language other than the original, when the target item in the horizontal relationship is the original or another translation. See Linking Entry Fields—General Information for more information.

### Field 765 & 767 Example

<table>
<thead>
<tr>
<th>Translation</th>
<th>Original</th>
</tr>
</thead>
</table>
Information about the host item for the constituent unit in a vertical relationship described in the record. Field 773 enables the user to locate the physical piece that contains the component part or subunit being described. Include in field 773 only those data elements necessary to assist in the identification of the host item (e.g., links to the bibliographic record describing the item and/or descriptive data that identify the host item). For host items that are serial or multivolume in nature, use subfield $g$ to point to the exact location of the component part within the bibliographic item. See Linking Entry Fields--General Information for more information.

Sources:
BFAS Field 773 (https://www.oclc.org/bibformats/en/7xx/773.html)

(https://help.oclc.org/Librarian_Toolbox/Searching_WorldCat_Indexes/Bibliographic_records/Bibliographic_record_fields_and_subfields/7xx_fields?sl=en)
Field 774 – Constituent Unit Entry

• Link to the constituent unit associated with a larger bibliographic unit
• Indexed subfields: $i, $4
• Does NOT transfer when records are merged
• May NOT be added to or edited in PCC records
• Required if applicable field (full)
• Optional field (minimal)
• Repeatable field
• Display constant: Constituent unit

Information about a constituent unit associated with a larger bibliographic unit. The constituent unit may be part of a single bibliographic item, a multipart item, or a collection. The constituent item may or may not be described in a separate bibliographic record. When a note is generated from this field, it is displayed with an introductory phrase that is generated as a display constant based on the 2nd indicator value. See Linking Entry Fields—General Information for more information.

7xx Linking Fields

Continuing Resource Specific Fields
Field 760 - Main Series Entry

- Link to a related main series when the target item in the vertical relationship is a subseries.
- Indexed subfields: $i, $a, $s, $t, $x, $y, $z, $4
- Does NOT transfer when records are merged
- May NOT be added to and/or edited in PCC records
- Optional field
- Repeatable field
- Display constant: **Main series**

Information about a related main series when the target item in the vertical relationship is a subseries. Use field 760 in addition to any other series information. Use separate 760 fields for each main series. See [Linking Entry Fields—General Information](https://www.oclc.org/bibformats/en/7xx/760.html) for more information.

Subfields indexes relate to the title, author, relationship terms, and standard numbers for that series.

Optional field for both Full and Minimal level records.

Display constant determined by the second indicator.

Sources:
BFAS Field 760 (https://www.oclc.org/bibformats/en/7xx/760.html)

Field 580 - Linking Entry Complexity Note

- Note explaining a complex relationship between the described materials and other items that cannot be adequately generated from the 76x-78x fields.
- Does NOT transfer when records are merged
- Indexed subfields: none
- May NOT be added to and/or edited in PCC records
- Required if applicable field (full)
- Optional field (minimal)
- Repeatable field

Note explaining a complex relationship between the described materials and other items that cannot be adequately generated from the 76x-78x fields.

Use field 580 also to state a relationship when no corresponding linking entry fields are present. For example, use for:
A regular-print reprint to provide details of the original publication
A continuing resource bearing a relationship to a monograph or other non-serial publication
A continuing resource bearing a relationship to one or more publications that cannot be named
A continuing resource issued in more than one frequency when two or more records are required

Required if applicable field for Full level records.
Optional field for Minimal level records.
