WELCOME

Welcome to the NetOpacs 5.3.3 Patch Installation Guide.

This is a patch release containing enhancements to the NetOpacs module. The complete installation time is estimated at less than one (1) hour to complete.

Please Note: This document has been prepared for all libraries that currently have the Amlib NetOpacs Module Version 5.3 installed.

OVERVIEW

The upgrade of the NetOpacs involves the following steps:

1. Shutdown the NetOpacs
2. Upgrade of the Amlib client application to NetOpacs 5.3.3
3. Restart computer
BEFORE YOU BEGIN THE INSTALLATION…

Read the Installation Notes First

Please carefully read the entire installation guide prior to commencing the actual NetOpacs release update.

If you have any questions please contact: support-amlib@oclc.org.

Serial Numbers Required for Installation of Amlib Modules

The NetOpacs 5.3.3 patch DOES NOT require a serial number.

Frequently Asked Questions

Question: Do I need to have a completed backup of my system before proceeding?

- Yes. OCLC (UK) Limited recommends that the library verify that it has an up-to-date backup of its database (for example: from the previous night) before installing any updates. You should also make sure that your tape backup includes a backup of your NetOpacs folder (for example: C:\NetOpacs) and all NetOpacs templates.

Question: Does NetOpacs need to be shut down?

- Libraries using the NetOpacs module should ensure that this program is shutdown prior to upgrading

Question: Can OCLC (UK) Limited install the upgrade for me?

- Yes. OCLC (UK) Limited can arrange for the onsite installation of this upgrade for a fee
UPGRADE NETOPACS

Please Note: This process is only for libraries that have purchased this optional module.

Depending on the library configuration the Amlib NetOpacs module will either be installed on the library database server (generally most school libraries) OR will be installed on a separate web server (generally public and all other libraries).

Step 1: Shutdown the NetOpacs

It is important that before installing the new NetOpacs release software that the NetOpacs WebConsole is shutdown (including all NetOpacs processes). Alternatively, if you may be running your NetOpacs as a Service or using a Service Manager to run your NetOpacs (for example: FireDaemon) then you should stop your NetOpac processes in the Manager.

To shut down your NetOpacs (via the WebConsole):

1. On your NetOpacs server, right-click on the NetOpacs WebConsole “traffic lights” in your Windows system tray at the bottom-right of the screen and select Exit:

2. The “traffic lights” and all NetOpacs icons on the Windows taskbar will disappear once NetOpacs has successfully shutdown

To shut down your NetOpacs (when running as a service):

If your server has the Amlib Web Monitor icon (icon is a PC with “cog”) in your Windows “tray it means that NetOpacs has been installed as a service.

1. On your NetOpacs server, stop the NetOpacs service either by a right-clicking on the Amlib Web Monitor and choosing Stop, or via the Windows Services screen:
To shut down your *NetOpacs* (when running via a Service Manager – for example: *FireDaemon*):

If your web server has neither the “traffic light” nor “cog icon” in the system tray, the *NetOpacs* may be running as a *FireDaemon* service.

1. **On your NetOpacs server, go to Start > All Programs > FireDaemon OEM > FireDaemon Service Manager** – the *FireDaemon OEM Service Manager* screen will display:

2. **Highlight the Amlib NetOpacs service and click the Stop** button

**Please Note:** The Webserver (*Windows 2000/2003 Server running NetOpacs*) should be restarted WITHOUT loading *NetOpacs* - you will need to check whether *NetOpacs* WebConsole is in the *Windows NT* “Startup” group (if it is you may need to temporarily remove it from the Startup group, or temporarily disable automatic startup if running as a service).
Step 2: Install the NetOpacs 5.3.3 Client Patch

**IMPORTANT:** Please ensure that you have full read/write access to the \*NetOpacs* folder on your server (for example: C:\\NetOpacs) and that you are logged in with Administrative Privileges.

1. The *NetOpacs 5.3.3 Patch* installer is available on the OCLC Website, under Updates and Patches>NetOpacs:  
(contact *Amlib* support if you require a login to this website)

2. Download the *NetOpacs533Patch.exe* and save it on your *Amlib* server

3. Double-click the *NetOpacs53Patch.exe* to launch the installation Wizard – the Setup – *Amlib NetOpacs* screen will open displaying the **Welcome** message:

   ![Image of Welcome screen](image)

3. Click the **Next** button – the **Installation Location** window will be displayed

4. Setup will search for the existing folder where the *Amlib 5.3 NetOpacs* are currently installed (if it is unable to find the existing folder a default folder will display)
5. If the folder displayed IS NOT correct then click the **Browse** button to manually locate the location of the existing `\NetOpacs` folder.

6. Click the **Next** button – the **Select Components** window will display:

7. Choose which components should be installed:
   a. **Select Modules To Install:**
      - Amlib NetOpacs Module

8. Click the **Next** button – the **Ready to Install** window will display with a summary of the installation tasks to be performed:
Ready to Install
Setup is now ready to begin installing Amlib NetOpacs on your computer.

Click "Install" to continue with the installation, or click "Back" if you want to review or change any settings.

Destination location:
C:\NetOpacs

Setup type:
Select home To install

Selected components:
Select Modules To Install
Amlib NetOpacs Module
9. Click the **Install** button – the **Installing** window will display:

![Installing Window]

10. Once the upgrade is complete, you will need to restart your computer/server – select from the following options:

   a. **Yes**, restart the computer now
   b. **No**, I will restart the computer later

11. Select the **Yes** option and click the **Finish** button

![Finish Window]

12. The setup Wizard will close
13. Your computer will restart

Installation of the **Amlib 5.3.3 NetOpacs Patch** is now complete.

**Notes**

For libraries who have configured their web server with multiple **NetOpacs** installation folders on the one server (for example: have **NetOpacs** installed in c:\Netopacs and c:\Netopacs2) will need to repeat the upgrade steps 3 – 13 for each additional **NetOpacs** folder, remembering to change the name of the Installation Location at step 4.
