Welcome to the OpenOPAC 6.2 Installation Guide.

Details on installing other components (such as the Amlib Client, ZServer and DIY Self Issues) are available in separate module specific Installation Guides.

Overview

The installation of the OpenOPAC involves the following steps:

1. Pre-requisites
2. Install OpenOPAC
3. Configure OpenOPAC [Marc fields]
4. Upload catalogue records
5. Configure styling and behaviour
6. It can be installed on the Amlib server, NetOpac server or a separate server depending whether it’s to be for internal use or external use

Before You Begin the Installation...

Before Installing OpenOPAC you must have upgraded to or installed Amlib 6.2 your server.

Read the Installation Notes First

Please carefully read the entire installation guide prior to commencing the actual OpenOPAC release installation.

If you have any questions please log a support call on TOPdesk https://oclc.topdesk.net/tas/public/login/form

If you do not know your TOPdesk login please email support-anz@oclc.org and we will send it to you.

Serial Numbers Required for Installation of Amlib Modules

The OpenOPAC 6.2 installation requires a serial key. Your library is covered for installation & use of OpenOPAC by your Library’s Amlib NetOpac licence. Please contact Amlib Support via Topdesk https://oclc.topdesk.net/tas/public/login/form before commencing the installation to receive this serial key.
## OPEN SUPPORTED OPERATING SYSTEMS & SYSTEM REQUIREMENTS

|                       | Windows 7, Windows 8.0 & 8.1  
|                       | Linux (and Unix)  
| .Net Framework         | 4.6 or higher including Web Server (IIS) Support and HTTP Activation  
| IIS                    | 6.1 or later with ASP.net support installed  
| Memory (RAM)           | Minimum 4GB  
| Hard Disk              | Minimum 40GB depending on the size of the catalogue  
| Browser                | IE 10 or higher  
|                        | Chrome, Firefox  
|                        | Safari 5.1.7 or higher  
| JavaScript             | Must be activated  
| Cookies                | Must be activated  
|                        | Automatic mobile device detection does not work without cookies. When cookies are disabled, the site can't store culture information [e.g. the language that is selected, and the date settings] and the login information is stored in a way that is considered to be unsafe.  
|                        | Note: OpenOPAC can operate on the same Amlib Database Server, it is recommended that medium to large libraries should implement a dedicated Web Server for maximum performance & security.  

Last Updated: 4 July 2016
SECTION 1: PRE REQUISITES

If not installed already you must first install .NET Framework Full version 4.0 or later and Java runtime version 6.2 or later.

IIS with ASP.NET support must also be installed. For information on how to complete this please see Appendix A and B.

SECTION 2: INSTALL OPENOPAC

OpenOPAC Software can all be found in the Version 6.2 folder, here under the ‘Set up Programs’ tab in the Amlib support section on the OCLC.org website.

Install OCLC OpenOPAC

1. Run the installer OCLC.OPEN.FrontendSetup.exe
2. The Installer for OpenOPAC main view will display
3. Select Options - the Options view will display
4. Enter the IIS host name, this should be the host name of the server/computer or if it is only to be accessed via network or a public domain name e.g.: http://library.yourinstitution.com
5. Enter the IIS port number you have assigned to OpenOPAC.
   Note: if you have instances of NetOpac or OPENReports installed ensure there are no confusion between the port numbers. Each application will need its own port number
6. Enter your Serial Number provided by OCLC
7. Select Close – the installer main view will display with the option to start the installation process enabled:

8. The Installer for OpenOPAC main view select Click to start installation – the installation will commence

9. A browser window will load. Minimise it as it will be needed later

**Setup Database Connection**

10. The Amlib Configuration Manager should open automatically

11. The AM and TE databases will display as default

   - **Please Note:** This configuration automatically has the AM [Live] and TE [Test] databases defined [but not set]

12. In the Amlib Systems tab, highlight the Live or Test database connector and Select the Edit button – the System Editor will open
13. If your database prefix is not ‘AM’ add a new connector by selecting the **New** button. On the **General** tab, enter the **Prefix** and a **Description**, otherwise continue with **step 6**

![General tab](image)

14. On the **Databases** tab, enter the following details:

- Choose the details for the **RDBMS** and **OleDbProvider** from the drop-down boxes

![Databases tab](image)

- Enter the details for the **Lib** database

![Lib database](image)

- **Server** – enter the name of the **Server** running your **Amlib** databases
- **Instance** – enter an **Instance**
  (only if required – otherwise leave as **Default**, an example would be **SQLEXPRESS**)
- **Port** – enter a **Port number** (if required – otherwise leave as **0** [for unused])
- **User** – enter the **Username** for the database connection
- **Password** – enter the **Password** for the database connection – the username and password should be the same as that the login for your other **Amlib** databases. **SYSADM/SYSADM** is the default login for most **Amlib** database setups.
7. Select the **OK** button once complete – the **System Editor** window will close

**Testing**

Once complete, the connection can be tested:

1. Highlight the relevant database – for example: **AM** – and Select the **Test** button

2. The **Test Connections** window will display with the result – if errors occur, the reason will display in the **Error Details** column:
   a. Test **successful** – all **Results** = **OK**: 
Test unsuccessful – all Results = Fail with Error Details shown. Use the error details to guide you and go back and check your configuration:

3. Select the Close button to close the Test Connections screen

Configuring the Connection for OPEN

1. Select the OPEN tab
2. Select the Database prefix for the one that has been configured

3. Select an Amlib Operator for example, OPAC, STAFF [depending on how it’s been setup]
4. Select **Save**

5. Select **Exit**
SECTION 3: CONFIGURE OPEN

1. Open the browser window that you minimised before - the address will be http://servername/Main.aspx. The search will not return any items because the Solr database is not filled with catalogues yet. You can also test external or network access by navigating to the hostname entered in step 4 of page 8. e.g. http://library.yourinstitution.com

2. To Log in as the administrator

Select > Log In

Username: Administrator

Password: 1234 [this is the default PIN, but we recommend the Librarian changes this PIN after installation is complete]
Go to the **Configuration tab** > select **Marc Fields** > then set them and select > **SAVE**

*The Librarian will need to set up these marc tags, before you can do the initial load.*

3. **Start the Upload Data process.** You can start them from the **Upload Tab**. Try one Catalogue item upload first. Please specify a valid catalogue ID before you start the upload process. Please note that the stock item must be set to Opac? = Y and the catalogue must be set to Opac View Restriction = N. The Librarian will be able to assist with these settings.

4. **Select on the Upload tab** and enter a valid catalogue reference number from Amlib and try uploading one catalogue [must do this TEST first to ensure all is correct]

   ![Upload one Catalogue](image)

   Please wait while the process executes

   The process will notify on success

5. **Start the upload of Upload all Catalogues**
If everything completed successfully the process to upload all catalogue items can be started. This may take between 10 and 60 minutes, depending on the number of catalogue records and the performance of the server. [If you cannot complete the ‘Upload all Catalogues’, because it stops or you get an error message before it completes, please take a screenshot of the error and contact support-anz@oclc.org or call 1300 260 795 for advice on how this can be resolved.]

6. Start the upload of **Master data** (takes about 2 minutes)

7. Start the upload of **Suggestions** (about 15 - 20 minutes)

8. Open is now configured and ready for use – with its default settings

9. Librarians will then need to log in as an **Administrator** on OpenOPAC and set up their own Configurations for Open, its theme colours, image, Library name, searches, the screen displays and all the settings required for their library. The **configuration guide** & **The Creating new themes and logos for Open OPAC** are available in the OCLC Downloads and Software Updates section, Version 6.2 to help you configure your OpenOPAC.

10. **If you wish to use the NEW Front page option:** This needs to be setup when logged in as the **Administrator > Configuration > Custom text** tab. This will appear under your Home page before a search is conducted.
    - You can include an image of your library or maybe a location map
    - Details about your library & you’re opening hours
    - Contact details
    - Other links to social media you may like your patrons to use

**Options:**

11. If you decide to use SSL transport security, you have to create the according binding in IIS and connect a valid certificate with the binding. Client certificates are not necessary.
OpenOPAC Installation Guide

12. If you want to use net.tcp as protocol for communication between the internal web services, you have to enable net.tcp on the virtual directory and enable net.tcp in the bindings of the web site (Not the virtual directory).

13. If this doesn't work check if net.tcp is installed with the windows version you are using (go to your installed Windows Features - in Control Panel / Programs and Features / turn Windows Features on or off) and check you have activated 'Windows Communication Foundation Non-HTTP Activation' (found under 'Microsoft .NET Framework 3.5 / 4.0 or higher')

SECTION 4: TROUBLESHOOTING

What do I need to check if none of the pages from OpenOPAC can be accessed?

There is 1 potential area that may need attention:
- IIS: There may be an issue with IIS or its configuration. This is less likely and once again troubleshooting will depend on the error received.

Where do I need to check when OpenOPAC is not working correctly?

- Restart IIS
- Send log file to Via Topdesk support call at https://oclc.topdesk.net/tas/public/login/form
  [ Log files are found here: \inetpub\wwwroot\OCLC Open Frontend\OclcLogFiles ]
- Go to the Configuration area > upload tab and re-set the memory [This clears all cached values, effectively causing the values being reread from Amlib. Values like master data, circulation settings, parameters etc.]

When do I need to use the Reset Memory or Save functions?

- Select Save As part of the initial configuration and when you have re-uploaded metadata or suggestions or changed catalogues

- Select Reset memory when supervisor/ parameter changes in the Amlib client have been made, so the changes will be sent and updated to OpenOPAC.

I cannot complete ‘Upload all Catalogues’ when doing the Initial Load, because it stops or an error message displays before it fully completes ...

- There could be an issue with your tables or indexes in the database, please log a support call on TOPdesk and attach a screen shot of the error message. If you do not know your TOPdesk login please email support-anz@oclc.org and we will send it to you
How do I ensure parameter changes I make in Amlib are transferred to OpenOPAC [such as supervisor or loan parameter settings]?

- Log in as Administrator > select configuration > Upload tab > and then select the correct option according to what you are updating [see the configuration guide – in the ‘Which CHANGES ARE INSTANTANEOUS and which ARE NOT’ section of the guide]
APPENDIX A: INSTALLATION OF REQUIRED .NET COMPONENTS

Windows Server 2012

1. On the Start page, Select the Server Manager Tile, and then select OK.

2. In Server Manager, select Dashboard, and Select Add roles and features.

3. In the Add Roles and Features Wizard, on the Before you begin page, Select Next.

4. On the Select installation type page, select Role-based or feature-based installation, and Select Next.

5. On the Select destination server page, select a server from the server pool, select your server, and Select Next.

6. On the Select server roles page, expand Application Server and ensure the following is installed:

   ![Application Server Components]

7. On the next page make sure the following are installed:

   ![NET Framework 3.5 Features]

8. Confirm and finalise installation, please note that you may require the Windows Server 2012 installation media to complete this installation

Windows Server 2008

Please run the .NET installer provided with the OpenOPAC installers.
APPENDIX B: INSTALLATION/CONFIGURATION OF IIS

Install IIS with .NET support on Windows Server 2012

1. On the Start page, Select the Server Manager Tile, and then select OK.
2. In Server Manager, select Dashboard, and Select Add roles and features.
3. In the Add Roles and Features Wizard, on the Before you begin page, Select Next.
4. On the Select installation type page, select Role-based or feature-based installation, and Select Next.
5. On the Select destination server page, select Select a server from the server pool, select your server, and Select Next.
6. On the Select server roles page, select Web Server (IIS), and Select Next.
7. On the Select features page, Select Next.
8. On the Web Server Role (IIS) page, Select Next.
9. On the Select role services page, note the preselected role services that are installed by default, expand the Application Development node, and then select ASP.NET 4.5. (If you installed .NET 3.5, select ASP.NET 3.5 also.)
10. On the Summary of Features to install page, confirm your selections, and then Select Install.
11. In the Add features that are required for ASP.NET 4.5? box, Select Add Features.

- The following additional features are added:
12. .NET Extensibility 4.5
13. ISAPI Extensions
14. ISAPI Filters
15. .NET Extensibility 3.5 (If ASP.NET 3.5 was selected)
16. Select Next.
17. On the Confirm installation selections page, Select Install.
18. On the Installation progress page, confirm that your installation of the Web Server (IIS) role and required role services completed successfully, and then select Close.
19. To verify that IIS installed successfully, type the following into a web browser:
   http://localhost
   The default IIS Welcome page is displayed.
Install IIS with .NET support on Windows Server 2008 or 2008 R2

1. Select Start, point to Administrative Tools, and then Select Server Manager.
2. In Roles Summary, Select Add Roles.
3. Use the Add Roles Wizard to add the Web server role.
4. On the Select Role Services page, note the preselected role services that are installed by default, and then select the following additional role services:
   - ASP.NET
   - .NET Extensibility
   - Request Filtering
   - ISAPI
   - ISAPI Extensions
5. On the Summary of Features to install page, confirm your selections, and then Select Install.
6. On the Installation Results page, confirm that your installation of the Web Server (IIS) role and required role services completed successfully, and then select Close.
7. To verify that IIS installed successfully, type the following into a Web browser:
   - http://localhost
   You should see the default IIS Welcome page.

Install IIS with .NET support on Windows 7 and Windows Vista

1. Select Start, and then Select Control Panel.
2. In Control Panel, Select Programs, and then Select Turn Windows features on or off.
3. In the Windows Features dialog box, Select Internet Information Services to install the default features, and then select the following additional features:
   - ASP.NET
   - .NET Extensibility
   - Request Filtering
   - ISAPI
   - ISAPI Extensions
4. Select OK to close the Windows Features dialog box.
5. To verify that IIS installed successfully, type the following into a Web browser:
   - http://localhost
   You should see the default IIS Welcome page.
APPENDIX C: LANGUAGE AND DATE CONTROL OF BROWSERS VIA IIS SETTINGS

To control the language setting of all your browsers in your institution/library who are accessing the OpenOPAC, you will need to change 2 settings in IIS [Internet Information Services manager]

Open IIS7

Highlight OpenOpacGui in your sites folder on the left

Select Net.Globalization from the ASP.NET box under OpenOpacGui home Page

There will be a drop down menu besides Culture and UI Culture

Change both of these to English (Australia) (en-AU) and then select Apply in the top right hand corner.

This will ensure that the flag in the top right hand corner of your browser when you access the OpenOPAC will always be the Australian flag. This setting appears to affect Chrome, Firefox and IE.
APPENDIX D: FORCING COMPATIBILITY MODE TO BE TURNED OFF IN IIS7

If OpenOPAC is opening in Compatibility Mode when using Internet Explorer it can be turned off via IIS. This is recommended if external users are accessing the website and having Compatibility Mode issues.

IIS 7 and IE 7 - 9

1. Open IIS [Internet information Service Manager]
2. Highlight OpenOPACGui
3. Select HTTP Response Headers from under OpenOPACGui home page

4. Select Add on right – top hand side

5. A pop-up box labelled Add Customer HTTP Response Header will appear

6. Type in X-UA-Compatible in the Name field
7. Type in IE=8 Value field
8. Then select OK
9. This will cause IIS to open in Internet Explorer to display OpenOPAC as if it was Internet on Explorer 8.
1. Open IIS [Internet Information Service Manager]
2. Highlight OpenOPACGui
3. Select HTTP Response Headers from under OpenOPACGui home page

4. Select **Add** on right – top hand side

5. A pop-up box labelled **Add Customer HTTP Response Header** will appear

6. Type in **X-UA-Compatible** in the Name field
7. Type in **IE=EDGE** Value field
8. Then select **OK**
9. This will cause **IIS** to open in Internet Explorer to display OpenOPAC with compatibility mode turned off [Warning **Edge** is sometimes unstable and is considered the setting for non-production sites, if you have any issues using this setting, then try IE=8 as the value instead]
APPENDIX E: TO HAVE A PUBLIC [EXTERNAL] FACING OPENOPAC

So that you OpenOPAC can be accessed from a webpage [publically] such as a council site or maybe a school website. There are two choices depending on how your network is set up, what is accessible and what is not and what your institutions preference is.

OpenOPAC can be installed anywhere on your Network, it does not need to be installed on your Amlib server or even on an Internal server, as long as OpenOPAC has access to the Amlib databases that is all that is required for it to run. Some clients will install this program on a Web-Server or in a De-militarized zone [DMZ] so it can be accessed by all anywhere. While others prefer to have their own internal set up.

If it has been installed on an Internal Server that has other important resources on it that you don’t want public to access, but is fine for library to use. Then we suggest you set up a second install of OpenOPAC on a Web-server that can be accessed by the public.

If you want to set up a second install Of OpenOPAC for this purpose, so they can be accessed publically on a council or school web-page/site

If installing on a web-server or in a De-militarized zone (DMZ) only

1. Install OpenOPAC on a web server or in a De-militarized zone (DMZ)
2. Install it on a different port from the default HTML port 80 - such as port 81
3. Ensure you put in the correct Hostname for this webserver when installing for the Hostname
4. Ensure that port 1433 is open on the webserver [for two-way traffic] – so it can access the Amlib databases – this is the only access OpenOPAC needs (everything else can be locked down and not accessible)
5. If using an enrichment provider such as Amazon.com or Syndetics etc. You will need to ensure that this web-server allows access to these sites by either adding them as exceptions to the firewall rules or add them as trusted sites. Otherwise images and content will not appear.
6. Also either have pop-up blockers turned off or sites such as www.amazon.com or http://www.syndetics.com/ enter them as exceptions to the pop-up blocker rule or add as trusted sites
OpenOPAC Installation Guide

You will need to do the following if this is a Second Install of OpenOPAC:

1. Install another OpenOPAC on a web server or in a De-militarized zone (DMZ)
2. Install it on a different port 83 to your internal one
3. Ensure you put in the correct Hostname for this webserver when installing for the Hostname
4. Ensure that port 1433 is open on the webserver [for two-way traffic] – so it can access the Amlib databases – this is the only access OpenOPAC needs (everything else can be locked down and not accessible)

5. If Library is using an enrichment provider such as Amazon.com or Syndetics etc. You will need to ensure that this web-server allows access to these sites by either adding them as exceptions to the firewall rules or adding them as trusted sites. Otherwise images and content will not appear.

6. Also either have pop-up blockers turned off or sites such as www.amazon.com or http://www.syndetics.com/ enter them as exceptions to the pop-up blocker rule or add as trusted sites

7. Then configure it the same as their internal one was configured
6. Load all catalogues etc.....
7. This new URL can put as a hyperlink on their council /library website that will go straight to OpenOPAC – giving them public access which is what it sounds like they thought they were getting
