Changes in this Release

This release of DataStore®DSX includes the following Enhancements and Error Corrections.

Enhancements

DSX Application

- DSX-7904 Data Definitions are now configurable to either allow or not allow multiple index sets on the documents it contains. Indexing Studio correspondingly reflects this new configuration setting.
- DSX-8590 A new Search Subscription utility has been added to schedule and manage searches.
- DSX-9272 Search Subscription results are now notified to the user using real time notifications.

DSX Application

DSX-8449 DSX-9403 DSX-8663	Start-up, clear down and reporting performance improvements to the Core Queue Entries service.
DSX-9721	The update statistics script has been validated against Microsoft Cumulative Update 4 for SQL Server 2016.
DSX-9333	DataStore®DSX has been validated against the latest version of Process Director v4.41.

Management Studio

DSX-5917	In Document Versioning, the routing panel now displays the document state if it is not the latest version of the document.
DSX-6095	Improvement in messaging when assigning a user a license if there are no licenses available.
DSX-6164	Improvement to messaging when a user attempts to store the same document previously stored and deleted.
DSX-7160	Improvements to Viewing Client to use new style email and print exports.
DSX-7205	Enhancement in Document Routing where pending automatic transitions periodically detect and enact documents without needing a trigger event.
DSX-7842	Automatic document transitions are implemented immediately an index value is modified.
DSX-8225	Enhance the Data Definition file test area to provide a dialog to allow checking the test file's encoding.
DSX-8416	Improvement to Reporting when generating reports managed by the same plugin.
DSX-8420	Reduced possibility of discrepancies when selecting fields for Reporting.
DSX-8578	Enhancements made with page retrieval in a multi-server environment.
DSX-8716	Provision of a script for storage usage for all Indexes and Tables in a specific database.
DSX-9213 DSX-9259	It is now possible to define overlays for PDF data in an Office Addin.

Searching Client

DSX-7887 DSX-7891 DSX-7981	Capability to select multiple result grids, rows and documents for export or printing.
DSX-7923	In the properties pane of a data item, viewing document location for a result of a search is restricted to users with the correct permission.
DSX-8418	Text stored in advanced compression files now display even if injected using incorrect encoding.

Error Corrections

DSX Application

- DSX-8146 Improvement to search performance on some search templates.
- DSX-8502 Previously when compression 4 cold data exporting to PDF with multiple pages the export missed the files in the detail view of the export.
- DSX-8837 Embedded tables in Word can now be edited when DataStore®DSX Addin is enabled.
- DSX-8962 DataStore®DSX custom task error correction in Process Director when the Refresh Data Definition selection was selected.
- DSX-9197 Regional improvements with the utility rebuild statistics.
- DSX-9226 Modification so a request query execution in SQL Search Assistant functions correctly.
- DSX-9227 Incorporation of the patch repair for DataStore®DSX Database v2.0.59 so that it will upgrade to this version release.

Management Studio

- DSX-7869 Warning information is given when a user tries to access settings in Management Studio which can only be changed on the server.
- DSX-8432 Indexing Options, Watched Folders. With 'Use encoding from pre-conversion' selected the Encoding Type column now displays the chosen encoding type.
- DSX-3363 In Storage the properties icon has been changed to be consistent across the application.
- DSX-7183 In the Search Display Website, when the Get File option is used with pageable Word documents, the original word document are now returned.
- DSX-7491 Enhancement to message when selecting a deleted Data Definition.
- DSX-7493 The Copy button on the data definition summary dialog has been removed.
- DSX-7592 Loading document indication now stops when viewing a restricted Excel document in Viewing Client.
- DSX-8358 Modification to Storage Explorer to rectify a Null Reference Exception in display control.
- DSX-8359 Change to Management Studio where a user without permission to manage data definitions does not have access to the "Open Data Definition" button in the watched folder errors screen.
- DSX-8361 A suspended reporting queue is no longer set to running if any of the Data Definition or Search Template is enabled for reporting.
- DSX-8438 Correction to Watched Folders to improve the service reliability.
- DSX-8467 Change to the Viewing Client login box removing a duplication of the DataStore®DSX title.

DSX-8560	Change to an Error message when saving a Search Template that is linked to a retention policy.
DSX-8564	Correction in Retention Policies to show the correct time.
DSX-8586	Prevention of text files in legacy encodings being stored as UTF-8 files.
DSX-9163	In Document Inventory the template path in the global configuration options now validates correctly.
DSX-9289	Correction to warning message "Cannot Index with Specified Code Page" so that it now logs correctly.
DSX-9389	Inventory Expiry Notification Emails can now use Inventory Email information when available in Configuration Options.
DSX-9394	Management Studio Search Template Edit now starts with All Versions Search as set by user.
DSX-9601	When configuring route reporting via Management Studio the Search template locking has been improved.

Searching Client

DSX-6607	Removal of an invalid operation exception when a content full text search field in search template and search specification was tree view controlled.
----------	---

Indexing Studio

DSX-8024	Office addin deploys and installs without adding some unnecessary files.
