## TAP Release Notes 1.2.1.8

This page details the bugs that were fixed in the 1.2.1.8 release.

### Feature Enhancements

The following enhancements have been implemented in the 1.2.1.8 release.

**Enhancement:** Check out our new and improved [TAP Client Success Center](#) that contains training material, user guides, knowledge base articles, FAQs, and the TAP Co-Innovation Center.

**Internal Tracking Code:** TAP-2749

**Additional Information:** This site can be accessed by clicking the Help button in your TAP application.

**Enhancement:** Users can now upload .tapw files into single or and multiple file uploads.

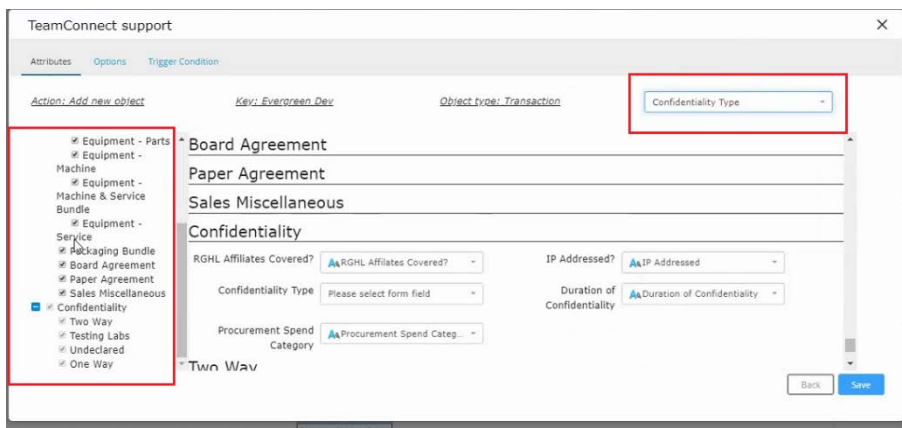

**Internal Tracking Code:** TAP-2539

**Additional Detail:** .tapw files are the file type in which TAP workflows are downloaded and uploaded. Learn more about acceptable attachment types on [this page in our User Guide](#).

**Enhancement:** This enhancement allows users to populate category-specific TeamConnect fields and assign a Category/Sub-category to the record being created in TeamConnect to a TAP field in a single step.

**Internal Tracking Code:** TAP-2591

**Additional Detail:** As seen in the image below, users can populate multiple Category/Sub-category fields in a single step. For More information on configuring this, please see our [Team Connect Integration Guide](#).

**Enhancement:** TAP Sign Signatures now have expanded character limits.

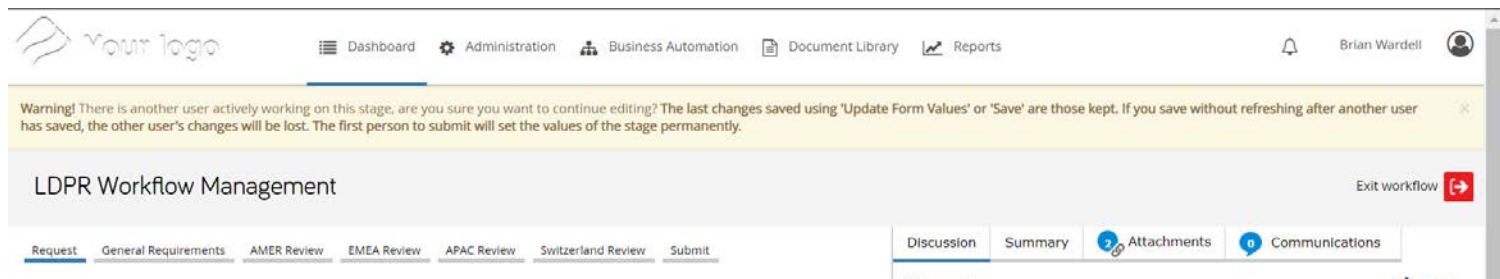

**Internal Tracking Code:** TAP-2970

**Additional Detail:** When using TAP Sign, the signature will no longer be cut off when you exceed 25 characters. Instead, the signature will continue to resize as more characters are added.

**Enhancement:** Collaboration Stages will now indicate when multiple users are in the stage at the same time.

**Internal Tracking Code:** TAP-2969

**Additional Detail:** If two or more users are accessing a collaboration stage at the same time, a banner will display at the top of the page (see below). This ensures that user's do not overwrite each other's data while completing the form.

The screenshot shows a web application interface. At the top left is a logo with the text "Your Logo". To the right of the logo are navigation links: "Dashboard", "Administration", "Business Automation", "Document Library", and "Reports". On the far right, there is a user profile for "Brian Wardell" and a notification bell icon. Below the navigation is a yellow warning banner with the text: "Warning! There is another user actively working on this stage, are you sure you want to continue editing? The last changes saved using 'Update Form Values' or 'Save' are those kept. If you save without refreshing after another user has saved, the other user's changes will be lost. The first person to submit will set the values of the stage permanently." Below the banner is a section titled "LDPR Workflow Management" with an "Exit workflow" button. Underneath are several tabs: "Request", "General Requirements", "AMER Review", "EMEA Review", "APAC Review", "Switzerland Review", "Submit", "Discussion", "Summary", "Attachments", and "Communications".

## Resolved Issues

The following items have been resolved in the TAP 1.2.1.8 release. Each issue is documented in the following format:

- **Issue:** A brief description of the bug that was fixed.
- **Tracking Code:** Internal tracking code for internal Mitrtech folks to reference.
- **Salesforce Case Number:** Curious if your bug was fixed? Copy your Salesforce case number and search for it on this page.

**Issue:** e-Signatures were not captured when there were multiple signatories on a TAPSign document. The audit trail only recorded timestamps for TAP users and did not record timestamps for non-TAP users.

**Internal Tracking Code:** TAPSUP-1171

**Salesforce Case Number:** 2019-0611-533119

**Expected Result:** Documents that are signed through TAP Sign should now display information for all signers in the document audit trail, regardless of whether they had corresponding TAP profiles or not.

**Issue:** An email not sent to the distribution list when the designated workflow stage was triggered.

**Internal Tracking Code:** TAPSUP-1208

**Salesforce Case Number:** 2019-0423-522682

**Expected Result:** Client-specific.

**Issue:** When a workflow is renamed, the new name was not reflected in the child workflows.

**Internal Tracking Code:** TAPSUP-1059

**Salesforce Case Number:** 2019-0516-527455

**Expected Result:** When using the Child Workflow functionality, the current name of a workflow will always display in the selector dropdown. If a workflow is designated as a child workflow and the workflow template is saved, it will update to display the new name if that child workflow's name is changed.

**Issue:** Changes to conditions were not saved when a condition template was selected then modified.

**Internal Tracking Code:** TAPSUP-1220

**Salesforce Case Number:** 2019-0718-540920

**Expected Result:** Template conditions that have been applied to a relationship will now update according to changes made to the template.
