

This document describes the files in the skin directories changed from 8.2.2 to 9.0.0 as well as what has been changed within the skin files. It is meant to be used when planning for the best way to carry your skin-level customizations from a previous version of WebVoyage forward to version 9.0.0. If you have not altered a file, you can copy the new 9.0.0 version over the existing file in whatever skin you would like. If you have customized a file, we recommend that you review the changes below but recommit your customizations to the *new* file. Test your skin after each customization is reapplied to the new files.

If you are upgrading from a version of Voyager prior to 8.0.0, please note that there is not a Changed Skin Files document. Since the process for upgrading to Voyager 8.0.0 and higher from an earlier release requires that you begin with the Voyager 8.x version of all skin files, no list of changed files is necessary.

Please see the Voyager 9.0.0 defect fixes for specific bug fixes that affect skin files. This document can be found on the Documentation Center under
Home > Documentation Center > Ex Libris Documentation Center > Voyager > Upgrade Release Planning > 9.0.0.

Changed skin files from 8.2.2 to 9.0.0

The following skin files changed in 9.0.0

The files below are all in the directory, /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/ui/exl_default/ (e.g. the first one is /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/ui/exl_default/css/ie7Fixes.css):

- /css/ie7Fixes.css
- /css/ie8Fixes.css
- /css/ieFixes.css
- /css/myAccount.css
- /css/personalInfo.css
- /jscripts/ajaxUtils.js
- /webvoyage.properties.tml
- /xsl/common/constants.xsl
- /xsl/contentLayout/cl_myAccount.xsl
- /xsl/contentLayout/cl_personalInfo.xsl
- /xsl/contentLayout/cl_requestForms.xsl
- /xsl/contentLayout/configs/displayHoldings.xml
- /xsl/contentLayout/configs/emailcfg.xml
- /xsl/contentLayout/configs/emailcfgHoldings.xml
- /xsl/contentLayout/configs/export/endNoteCitationConfigHoldings.xml
- /xsl/contentLayout/configs/print/printConfigHoldings.xml
- /xsl/contentLayout/display/display_text.xsl
- /xsl/contentLayout/display/display.xsl
- /xsl/sendRequest.xsl

The upgrade to 9.0.0 will overwrite your exl_default directory with all of the new files listed above, as well as the default versions of all other WebVoyage skin files. Never make changes to files in exl_default – make copies of the files to update your other skins.

The following vxws files changed in 9.0.0.

The files below are all in the directory, /m1/voyager/xxxdb/tomcat/vxws/context/vxws/ui/exl_default (e.g. the first one is /m1/voyager/xxxdb/tomcat/vxws/context/vxws/ui/exl_default/vxws.properties.tml):

- /vxws.properties.tml

Additionally, Voyager 9.0.0 contains the following new files in the tomcat directory (*/m1/voyager/xxxdb/tomcat*):
/vxws/ini/RateLimitSkipList.tml

Skin file content changes 8.2.2 to 9.0.0

Below contains exactly what has been changed in each file for 9.0.0.

# My Account - Notification of patron expiration
#
# The system administrator may choose to notify patrons when their account
# is about to expire. The value in expireNotifyLead must be in days.
# Use the placeholder \d to display that day value in the message(s).
# The message expireNotifyMsg will be displayed at the top of the My Account
# screen. The message viewPersonallInfo.expireNotifyMsg will display at the
# bottom of the Personal Info page.
# In cases where the expire date happens within 24 hours the system will
# use the expireNotifyMsgWithin24Hrs message. The placeholders \h \m and \s
# will be replaced with hours minutes and seconds left.
# The system wont calculate just minutes, or just seconds, so the message should
# contain Hours, or Hours and Minutes, or Hours Minutes and Seconds.
# The Syatem Administrator may opt to not include any hours,minutes, or seconds
# in the message as well.
