SW 4.8.2.1 Hotfix

Type of Change	Component	Description	File List
Defect	Back Office - Export	In the 4.8.2 SP, the export file names for the XML, AlephSeq, and TXT advanced formats was changed to include institute name information. This change caused a regression problem in the Google Scholar export, which was also affected by the name change. Customers with institutes defined in the SFX instance would get different export file names for the Google Scholar and Primo Central holdings files, causing problems with updating the holdings information for both services. This problem has been fixed by reverting the export tool back to its pre-4.8.2 state.	lib/Admin/Tool.pm
