Defect	KBManager > Security vulnerability	<p>Resolve a security vulnerability caused by the way SFX validates Plugin thresholds in the SFXAdmin > KBManager. To ensure the validation cannot be used to potentially harm the SFX server, the validation of plugin thresholds included in KBManager was changed. Characters in the plugin name will now be restricted to only valid Perl module characters (including alphanumeric characters and some punctuation). This change will not have an impact on existing KBManager and SFX plugin functionality.</p>		<input type="checkbox"/> lib/MetaData/Validator/Threshold.pm	SFX-7761	00632755
