

Release Notes

MediaBeacon R3volution, version 7.7

12/18/2015

Fixes

- **User Interface**

- Resolved an issue where clicking a destination in the Places Browser would not update the View Widget.
- Resolved an issue where workspaces added to the no login ACL were not displayed in the set order and users were not directed to the correct ACL.
- Resolved an issue where pre-extended view on assets would start with no M3TAFORM tabs present when metadata existed.
- Corrected an issue in which dragging and dropping assets on other assets would not link them as expected.
- Fixed an issue in which moving an .xmpb asset to a subfolder of its bundle would cause an infinite loop of directory creation.
- Resolved an issue where users were unable to use the datepicker user interface for date fields in Text View.
- Corrected an issue where an incorrect asset ID could be inserted into a selection-based email.
- Corrected an issue in which a user may be unable to access all fields on a M3TAFORM on Upload.

- **Searching**

- Resolved an issue in which 'begins with' and 'ends with' searches were not available on fields that were not SQL indexed.
- Corrected an issue in which substring searches did not work in R3search widget with hierarchy fields.

- **Downloading**

- Corrected some issues where not all assets from a Loading Dock would be in the .zip when emailed.
- Resolved an issue where clearing the Loading Dock would improperly change the workspace.
- Fixed an issue where XMP would not be written into an asset upon download.

- **Import/Export**

- Fixed an issue where asset counts using bulk select will accurately reflect what is being selected.
- Corrected an issue where quickly uploading various assets one at a time via the Admin upload menu option would fail with some assets.
- Resolved an issue in which importing placeholder assets via .csv upload sans filename would only create 11 assets.

- **Metadata Edit**

Fixed an issue in which nested bundles made pre-6.x would lose data when moving to 7.x and above.

- **Dictionary**
Corrected an issue where updates to capitalization on dictionary entries was not reflected in values already written to assets.
- **Administration**
Corrected an issue in which Forgot Password emails were sending with expired password reset links.

Features

- **API**
Added support for specific encoding to be used when getting a reader object in workflow API
