

PROJECTXR

After two years of development, IMAJION released the ProjectxR system at the Procore trade show in October and the Autodesk and Small Business Association trade shows in November. Reception to the product exceeded expectations and ProjectxR is being evaluated for immediate deployment by over 100 companies.

IMAJION's technology used in ProjectxR was developed to improve the way companies collaborate and communicate - specifically in the construction industry and in field management across many industries.

BUILT BY: **IMAJION**

CONFERENCE PLATFORM

ProjectxR is IMAJION's custom built conference platform specifically designed for the construction industry and field maintenance experts.

Use the ProjectxR platform for all your company's conference calls with full audio and visual recording capabilities.

Using the HoloLens and our platform, a representative on-site can provide full audio and visual access to clients and stakeholders on their computers in any location around the world in real time, recorded securely for future use.

WEB FEATURES

- Anyone within a conference can create Push Pins and attach notes (minutes, areas of concern, safety issues, etc) for later review.
- Capture and download the HoloLens real-time view at any point within a conference.
- Share secure files from Procore, BIM360, or DropBox with all conference participants (including the HoloLens).
- Message or call any member of your team, with support for in-conference conversations, file sharing, and notifications.
- Multiple screen sharing for side-by-side discussions, all members within a conference can share their screens at the same time.
- Search and view BIM360, Procore, and Dropbox project files to share within a conference.
- Record any conference and message feed for later review.
- Automatically sync all team members from BIM360 and Procore, enabling your team access to discuss issues around the project, also temporarily invite people outside the project into a conference.
- Create one time or recurring conferences with actionable agenda items. Share conference information using email or 3rd party applications including emailed calendar reminders.

HOLOLENS FEATURES

- Resolve issues by placing Push Pins anywhere on-site to indicate areas of interest.
- Place Arrows designating an area or item of interest on-site for all participants to see.
- Use the Ruler tool to measure distances between two points when on-site.
- Capture pictures and videos on-site that are then automatically uploaded to your preferred media store: Procore, BIM360, or Dropbox.
- View shared project photos, videos, PDFs, and drawings on the HoloLens.

BENEFITS

- Significantly increases presence at the job site while reducing travel costs.
- Improves collaboration among all parties to reach an informed decision faster.
- Records audio and visual content to document work progress, optimize accountability, and avoid litigation.
- Enables realtime design dialogue and cooperative changes.
- Develops detailed records of issues with audio, video, and notation as context towards an explanation.

SYSTEM REQUIREMENTS

Google Chrome Browser

ProjectxR supports Mac and Windows computers, through the Google Chrome browser.

Microsoft HoloLens

ProjectxR supports all current HoloLens. *With options to rent or buy.*

Internet Connectivity

ProjectxR supports Wifi and mobile hotspot internet connections. *Networks can be extended with cellular signal boosters.*
