

# Virtual Office Sandbox

## Sandbox

This 4 hour session is facilitated by a Virtual Office subject matter expert. Participants are given administrator access to an unconfigured VO environment to experiment and practice setting up, configuring, and administering a VO solution.

During the session, participants receive a workbook that will guide them through setting up a VO solution based on a predefined scenario. Participants may choose to follow the workbook at their own pace or practice and experiment with VO features, functionality, and configurations of their own choosing.

The subject matter expert will be available throughout the session to answer questions and assist with any issues as participants experiment and practice in their sandbox environment.

## Advantages

- Additional hands-on time to practice and reinforce previous training
- Test and play with new features and functionality
- Additional hands-on practice in preparation for a certification exam
- Experiment with a new configuration or use case
- Ask the facilitating subject matter expert questions pertaining to your activities in the sandbox environment

**Recommended Prerequisite**  
Virtual Office Administration and Configuration

**Target Audience**  
System Administrators responsible for administering and configuring 8x8 Virtual Office systems

**Session Length**  
4 hours

**Training Units**  
5
