Legend
A Tier 1 platform version (denoted in the matrix with bold font, and shaded boxes) is a platform that receives testing and certification priority from 170 Systems for new releases. Future releases of 170 MarkView will generally support Tier 1 platforms upon release.
A Tier 2 platform version (with no shading) is a version that may not be supported as part of the initial release of new versions of MarkView. Support for Tier 2 platforms may be delayed for several weeks or months beyond the initial MarkView release, and will be added to the Supported Platforms Matrix as their individual certifications are completed.
<i>Some platforms in the matrix are denoted with italics, which indicates that this MarkView release will be the Terminal Release for that platform version. Future releases of MarkView will not support this platform version.</i>
