Installing Kofax TotalAgility 6.0.1.0

Before installing Kofax TotalAgility 6.0.1.0, do the following:

- Log on to the computer as a user with Administrator rights.

Important Backup your TotalAgility database before continuing.

- Confirm that you have Kofax TotalAgility 6.0/6.0.0.x version. You cannot install this upgrade over earlier versions of Kofax TotalAgility 6.0.0.0.

Then, install Kofax TotalAgility 6.0.1.0 by doing the following:

- 1 Download the installation package and unzip the files.
- 2 Double-click Setup.exe from Kofax TotalAgility 6.0.1.0 folder located in the TotalAgilityInstall folder.

Note The TotalAgility services are restarted automatically.

New Features

This chapter lists enhancements that have been added to the product in Kofax TotalAgility 6.0.1.0 as well as Kofax TotalAgility 6.0.0.1, Kofax TotalAgility 6.0.0.2 and Kofax TotalAgility 6.0.0.3. When you install Kofax TotalAgility 6.0.1.0, it includes all of the enhancements that were introduced in the earlier fix packs.

Multilingual Support

The Kofax TotalAgility Workspace now comes in six languages:

- English (en)
- French (fr)
- German (de)
- Spanish (es)
- Italian (it)
- Portuguese Brazilian (pt-BR)

Change the browser settings accordingly on your workstation for localized Kofax TotalAgility Workspace and Help.

Important In the concurrent multilingual environment, the server side messages such as error messages are returned to the client in the language of the server locale, if that is supported. This also applies to error messages displayed in the TotalAgility Designer.

SharePoint 2013 Support

TotalAgility is now seamlessly integrated with Microsoft SharePoint 2013 (the latest version of SharePoint) and lets you perform a number of tasks directly from TotalAgility.

Resolved Issues

This chapter lists the issues that have been resolved in Kofax TotalAgility 6.0.1.0 as well as Kofax TotalAgility 6.0.0.1, Kofax TotalAgility 6.0.0.2 and Kofax TotalAgility 6.0.0.3. When you install Kofax TotalAgility 6.0.1.0, it includes all of the resolved issues that were included in the earlier fix packs.

Kofax TotalAgility 6.0.0.2

Dynamic Navigation Action not working for an Embedded web page

In the Embedded Page control, when the Navigation Action property is set to Dynamic, and form field or form variable is used, the web page is not loaded and a blank page appears at run time. (SPR00119233)

Unable to pickup the variable Id in a simple Script activity

At run time, the simple Script activity picked up the variable name instead of variable id which caused an exception. An error message is displayed in the job notes and the job is suspended. (SPR00118358)

Unable to display SubJob properties at run time

When the process has a sub process and the user creates a job on the main process and navigates to view its subjob properties, such as, history and variables, a message appears for insufficient permissions. (SPR00118370)

Database error occurred when DBQuery had the 'Contains' keyword

When an event is performed on a form that had a DB query using the `Contains` keyword, a database error is displayed. (SPR00118544)

Cannot use mathematical operator in a string in Calculation rules

If a mathematical operator is used as part of string, the form fails to load. If you use a mathematical operator normally, for example, $1+3-2$, the form will not fail, however, if you use the mathematical operator as part of string, for example, "Fred" + "mis-understood", the form will fail, as hyphen is taken as the minus sign. (SPR00118502)

Kofax TotalAgility 6.0.0.3

Renaming an activity in a template does not reflect correctly in a skin at run time

When an activity is renamed in a template, the activity name is updated in the skin properties, but at run time, the wrong version of the map is displayed in the job properties and map view. Also, in the work queue, the old activity name appears. If the

skin is saved and released, and a new job is created, the correct activity name appears. (SPR00120443)

Unable to access the URL for Document Template at run time in Azure environment

When a URL is used as a document template location in a Document Creation activity, at run time, the URL cannot be accessed and the following error message is displayed: `Invalid template.` (SPR00119163)

Web page error occurred while loading an embedded form

An Embedded Webpage control with dynamic navigation and initialization variables fails to load the embedded form reporting a web page error at run time. (SPR00120210)

Parameter values not removed when deselecting the Static icon

The inline (static) value specified for an input parameter of a .NET action on a form is not removed on deselecting the Static icon. (SPR00120137)

Kofax TotalAgility 6.0.1.0

Unable to load the form with Onload Set Focus Action

If a Set Focus action is added to the Onload event, the form fails to open at run time. (SPR00121083)

Category and actions disappear if you cut a cell and its control and paste into a new row

If you cut a cell (Ctrl +X) and its controls and paste (Ctrl+V) into a new row and release the form, category and actions are missing on opening a form. (SPR00122128)

Cannot use the properties of the File Upload control in the Same Page action

It is not possible to map the Destination property of a File Upload control to the target field in a Same Page action. This means that the destination cannot be specified dynamically. Trying to consume one of the File Upload control properties in the Target box of the Same Page action shows a red warning sign, indicating that the mapping is not allowed. (SPR00119228)

Cells are not shifting up when a cell is hidden by a display rule

When you use a display rule to hide a cell on a form, the cells below the hidden cell do not shift up. As a result, at run time, a blank space is displayed in place of the hidden cell. (SPR00120671)

Work queue definition fields display blank values for case fragment

When a case definition is associated with a work type and the Work Queue form is generated, the work queue definition field values are not displayed for case fragments at run time. (SPR00120905)

Field values from the stored procedure are not displayed in the table

When a form is generated with table control mapped with a ResultSet, and a query is executed to retrieve the field values from the stored procedure, the values are not populated into the Table control at run time. (SPR00120911)

Document created in Azure is not found

When a document is created by a Document Generation activity in a process running in Azure, other activities in the same process are unable to access the document when simply using the document name. The following error is displayed: Could not find a part of the path. (SPR00121085)

Changes to the value of a global variable are not picked up at run time

If the value of a global variable used in a form is changed, when the form is re-viewed, the old value is still displayed. (SPR00121681)

Dynamic target due date lost on export/import

The dynamic target due date for an activity is lost on export and subsequent re-import into another system. (SPR00122131)
