

Release Summary

The main features of Release 4.3.1 are:

- Performance improvements
- User-controlled localization
- Numerous enhancements
- Bug fixes

Performance Improvements

Major performance improvement is provided in this release. It includes the reduced time for the initial dashboard appearance, caching the meta model on the client side, and faster data processing based on the variable calculation interval for the pre-processed metrics.

User-Controlled Localization

If the translations are available, end user can view the same dashboard in multiple languages. Special control to change the language is provided.

Enhancements

Other major enhancements include:

1. Conditional coloring of Pins in Map components
2. Conditions IN and NOT IN in search panel
3. Validation step in Execution Plans
4. Integrated Period Driver
5. Variable calculation intervals for pre-processed metrics
6. Product Manuals included into installer
7. FIPS compliance
8. Custom Login page
9. Per-component logging option
10. Process Control charts
11. Support for IE 11
