# Overview

The Kofax Invoice Add-On Pack 1.1 for KTM built on Kofax Transformation Modules 5.5.2, seeks to provide a best practice framework for invoice processing, which can be built upon by Professional Services and Partners alike. The overall goal is to aid the efficient and accurate processing of invoices by providing complete and correct data from the invoices.

You can use the Kofax Invoice Add-on Pack 1.1 for KTM to process invoices from around the world. The Kofax Invoice Add-on Pack 1.1 for KTM contains pre-configured fields, locator methods, formatting, validation rules, and a validation user interface. You can customize the predefined validation rules, formatters, validation form layout, database lookups, and scripts to meet your requirements.

Scan operators can scan these documents without pre-sorting or classifying them, as the documents are automatically classified, and data is automatically extracted during processing. Validation operators can validate data that has been automatically extracted. The validation process can be optimized through the use of locators that look up and match invoice extracted data with known values in source databases like an ERP or accounting system.

---

# Key Features

The Kofax Invoice Add-On Pack 1.1 for KTM includes:

- Proven extraction results of >75% for unknown invoices for five different countries.
- Proven extraction results of >97% for known invoices for five different countries.
- Localization in four languages (DE, FR, ES, EN).
- Optimized extraction, formatting, validation and reduced scripting making use of the KTM 5.5 features.
- Demo invoices and databases for five different countries.
- Documentation on how to demo the project.
- Documentation on how to configure the project for delivering a proof of concept (POC) and customer implementation.
