Release Notes

Please read these notes carefully, because they contain information that is not included in other Kofax Web Capture documentation.

New Features in 10.4.0

The following features were added to Kofax Web Capture in version 10.4.0:

- The viewers in Kofax Web Capture .NET edition can now view Microsoft Word files (.docx and .doc).
- Kofax Web Capture .NET Edition can create and read data from PDF forms, and programmatically fill in the forms with data.
- Kofax Web Capture .NET Edition's PDF features support the ability to repair and open many out-of-specification PDF files.
- Kofax Web Capture .NET Edition includes a SharePoint solution that allows capture and document viewing to be embedded in a SharePoint site. You can export captured documents to Kofax Capture or to a SharePoint repository.
- Kofax Web Capture Java and .NET editions both include a new GUI control to view document pages as a list of thumbnails, and the control is available for desktop and mobile browsers.

Resolved Issues in 10.4.0

When you install this version of the product, the following solutions are available for previously reported issues.

- Bold fonts in WANG annotations are correctly interpreted.
- The first page is no longer loaded twice in Web Document Viewer.
- In .NET PDF Viewer, text now displays properly for PDF files that use embedded font dictionaries.
- A null reference exception no longer occurs when a callout annotation is ungrouped in the WPF viewer.
- An error is reported successfully when you attempt to read a UPC-E bar code with an invalid message length. Previously in this situation, a null reference exception occurred instead of an error.
- If necessary, you have the ability to use client code to close Web Document Viewer streams.
- The proper orientation is now reported accurately for DataMatrix bar codes.
