Pittsburgh, PA and surrounding area

EnviroAtlas combines maps, analysis tools, fact sheets, graphs and downloadable data into an easy-to-use, web-based educational and decision-support tool. EnviroAtlas helps users understand the connections between the benefits humans derive from ecosystem services and the natural resources that provide them.

In addition to national maps, EnviroAtlas includes fine-scale maps for selected U.S. communities about existing and potential benefits from the local natural environment. This fact sheet highlights some of the many community data layers available. For more information, please visit our website.

Background
The Pittsburgh, PA area was chosen as an EnviroAtlas community based on a request from EPA Region 3. It also offers multiple opportunities to leverage existing research and community engagement activities, and had received poor air quality ratings that can be evaluated from a green infrastructure perspective. The EnviroAtlas boundary for the Pittsburgh area was determined using the 2010 Census definition of an Urban Area. It includes the city and suburbs of Pittsburgh—most of Allegheny County. The area measures 1,696 square kilometers, and encompasses 1,089 census block groups.

The Pittsburgh, PA area is in the Western Allegheny Plateau ecoregion. It has a severe, humid climate with hot summers and cold winters. This area is vegetated with mixed-oak forests, although much of the area has been extensively mined. The community’s economy was based in steel for decades, but is now highly diversified. The largest employers include UPM Shadyside Hospital, the University of Pittsburgh, and Giant Eagle supermarkets. The demographics of the Pittsburgh community area indicate that the potential exists for income and other disparities in the distribution of environmental assets. EnviroAtlas includes demographic maps that can help screen for potential health and well-being disparities resulting from disproportionate distribution of “green infrastructure.”

Ecosystem Services Overview
In EnviroAtlas, ecosystem services are organized into seven benefit categories:

- Clean air
- Clean and plentiful water
- Natural hazard mitigation
- Climate stabilization
- Recreation, culture, and aesthetics
- Biodiversity conservation
- Food, fuel, and materials (data available only in select communities)

Examples of some of the data included in EnviroAtlas are detailed below.

Green Space and Trees
Research indicates that physical and visual access to trees and other green space has positive physiological, cognitive, and emotional benefits. In the Interactive Map’s table of contents, green space data layers can be found under all of the benefit categories.

- There are 1,097 square meters of green space per person.
- 74 out of 508 K-12 Schools have less than 25 percent green space within 100 meters.
- There are 7,196,995 tons of carbon stored in the local tree biomass, with an additional 228,357 tons sequestered annually.
- The local tree canopy removes 3,760,099 kilograms of ozone from the air every year.

Access to Parks
Parks provide access to green space, encourage physical activity, and improve the livability and aesthetics of urban areas. Those who live closer to parks may be more likely to receive the multiple benefits associated with this proximity.

- An estimated 14 percent of the Pittsburgh area is located within easy walking distance (500 meters) of a park entrance (dark and medium green areas in figure above).
- An estimated 1.3 percent of the Pittsburgh area does not have a park entrance within 5 kilometers (white areas in figure above).

In the Interactive Map’s table of contents, park access layers can be found in the Recreation, Culture, and Aesthetics benefit category.

EnviroAtlas Tools and Features
- **EnviroAtlas Community Component**: Data layers based on 1-meter land cover summarized to the block group scale.
- **EnviroAtlas National Component**: Data layers based on 30-meter land cover summarized to the watershed scale.
- **EnviroAtlas Interactive Map**: Go directly to the Interactive Map.
- **EnviroAtlas Fact Sheets**: Describe the project, each community, and each data layer in detail.
- **Eco-Health Relationship Browser**: An interactive relational tool that explores ecosystems, the services they provide, and benefits to human health and well-being.
- **Contact the EnviroAtlas Team**: Please contact us if you have any questions about EnviroAtlas.
