

## About the Vehicle Inspection application

Drivers use the Vehicle Inspection application to perform daily tractor and trailer inspections. When they report a defect, the company can respond quickly to repair and return the vehicle into service. The driver must acknowledge that the vehicle can be safely operated after a defect is resolved.

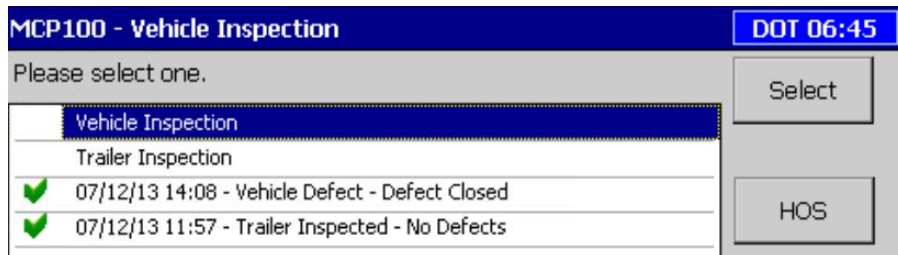

When you ask to view the last inspection report, instead of giving you a hard copy, the driver will show you the in-cab display unit and this card.

## View the Last Vehicle Inspection Report

1. On the Home screen, scroll down and tap the **Vehicle Inspection** button.

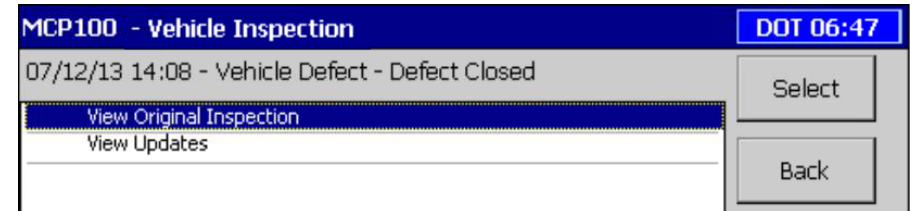

2. Tap the Vehicle Inspected or Trailer Inspected line you want to view, and tap Select.

**Note:** If the previous inspection had a defect, you can view the original report and the resolution information.

3. If there was a defect, select **View Original Inspection** or select **View Updates**. Then tap Select.

4. Tap **Next Page** to view the rest of the report.
