Troubleshooting Data

John McAlmon, Senior Financial Software Support Specialist

Troubleshooting Data

What will we be covering?

- Viewing what data was (or wasn't imported)
- Determining how data is calculated in sheets and reports

What is the benefit for you?

- Know where your data is coming from and how it is calculating
- Resolve discrepancies in your data

Let's Take a Deeper Look!

Live Demo

Troubleshooting Data - Recap

- *Import history – shows Actuals data that was imported in the past.*
- *Mappings – check these to confirm where data is going when imported into your Adaptive model.*
- *Explore Cell – view the calculations that make up a value.*
- *Row details – view the underlying data driving values in modelled sheets.*
- *Enable actuals – accounts can be configured to allow or disallow data entry in Actuals versions.*
- *Validate formulas – checks all formulas in your model for errors.*
- *Shared formulas – use the Formulas page to see if formulas are missing from accounts or have been overridden by user edits.*
- *Report difference – use a matrix report to see if formulas are missing from an account at certain levels.*
